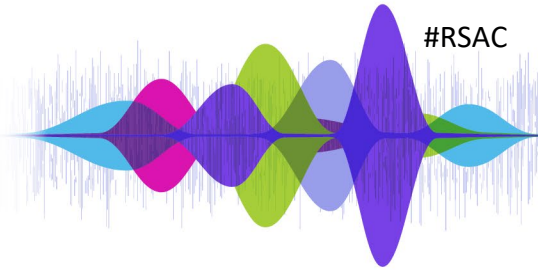
# Apply What You Have Learned Today



- Next week you should:
  - If you are operating in the EU and participating in the voluntary Cyber Trust Mark program, conduct an internal audit of your current product security compliance processes to identify redundancies between EU requirements and US requirements
- In the first three months following this presentation you should:
  - Map your existing security controls against both CRA and Cyber Trust Mark requirements to identify overlap and gaps
  - Establish direct communication channels with relevant regulatory authorities in your key markets to voice harmonization challenges
- Within six months you should:
  - Engage with your industry association or with government officials directly to contribute to harmonization discussions and stay informed of regulatory developments
  - Consider developing a documentation framework that can satisfy multiple regulatory requirements simultaneously
